

Belarusian Fiber Optic Hybrid Cable OS2

Overview

Pro Optix provide a range of fiber cabling solutions in various lengths and connection types according to your network requirements.

Key Takeaways

The Belarusian OS2 hybrid fiber optic cable is a single-mode, indoor/outdoor cable combining optical fibers with copper conductors for versatile network deployment. Cable Type and Structure

The OS2 hybrid cable is a single-mode fiber optic cable designed for long-distance, high-speed transmission. It typically features 2 optical fibers with a tight-buffered 3.0mm breakout design, combined with copper conductors (e.g., 12 AWG) for power or signal transmission, making it a true hybrid cable suitable for both data and power delivery. The cable jacket is usually black and rated for indoor/outdoor use, providing protection against environmental factors such as moisture and UV exposure.

Fiber Specifications

- Type: OS2 single-mode fiber
- Core Diameter: 9 μm , guiding light in a single path for minimal dispersion
- Performance: Supports high-speed data rates, up to 100 Gbps over 10 km at 1310 nm wavelength, and distances up to 40 km for 10 Gbps
- Attenuation: Low signal loss, typically under 0.4 dB/km at 1310 nm, ensuring long-distance reliability

Hybrid Features

The hybrid design integrates copper conductors alongside the optical fibers, allowing simultaneous power and data transmission. This is particularly useful for remote devices, outdoor installations, or powered network equipment. The cable is engineered to withstand tensile stress during installation and operation, ensuring durability in both indoor and outdoor environments .

Applications

- Indoor/Outdoor Networks: Campus backbones, inter-building links, and enterprise fiber-to-desktop deployments
- Long-Haul Single-Mode Links: Telecommunications, data centers, and high-speed backbone networks
- Hybrid Deployments: Powering remote devices while maintaining high-speed fiber connectivity, such as security cameras, wireless access points, or industrial sensors

Installation Considerations

- Ensure proper tensile strength limits are observed during installation to prevent fiber damage
- Use appropriate connectors and splicing techniques for OS2 single-mode fibers
- Maintain bend radius guidelines to avoid signal attenuation or fiber breakage

Summary

Belarusian OS2 hybrid fiber optic cables provide a robust, versatile solution for modern network infrastructures, combining long-distance single-mode fiber performance with integrated copper conductors for power or auxiliary signals. They are ideal for indoor/outdoor applications, supporting high-speed data transmission while simplifying deployment of powered network devices .
