

Between vertical cable trays in the power distribution room

Overview

Spacing Standards: Electrical (power) and instrumentation (signal/control) cable trays should maintain a minimum vertical and horizontal distance. The spacing between trays, whether horizontal or vertical, depends on various factors like cable type, environment, and tray material. Proper installation can significantly reduce electromagnetic interference, prevent fire hazards, and improve overall efficiency. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. This document deals with cables trays, cables and connector installation and segregation, cable trays earthing and E. These rules shall be applied in the cabling engineering workflow for all subjects concerning or in relationship with cabling in the ITER facility.
