British Silicon Photonics Technology QSFP-DD

Overview

QSFP-DD is a compact and fast optical transceiver that supports increased data capacity in modern networks.

Key Takeaways

The 4x 100G QSFP-DD FR1 optical transceiver that provides 4 parallel 100GE links over 4 single mode fiber (SMF) pairs via its MPO-12 connector. Each fiber pair link is compliant to 100GBASE-FR1 and thus can support a 400GE to 4x 100GE breakout over 2 km. Cisco offers a comprehensive range of pluggable optical modules in the Cisco ® pluggables portfolio. The wide variety of modules gives you flexible and cost-effective options for all types of interfaces. While maintaining the QSFP form factor it doubles the number of high-speed electrical interfaces thus enabling data rates of 400 Gbps or more. 5625 GBd PAM4 electrical. QSFP-DD (Quad Small Form-Factor Pluggable Double Density) represents a transformative advancement in optical transceiver technology, addressing the exponential growth in data center bandwidth requirements and the demands of modern high-performance computing environments. The QSFP-DD specification, maintained by the QSFP-DD.
