

Fiber optic patch panel fully equipped with 24 core cables

Overview

12-24 Core Fiber Optic Patch Panel for Cable The 12-24 Core Fiber Optic Patch Panel is made of durable cold Fiber Patch Panel, 24 Port Loaded SC Simplex,1U.

Key Takeaways

A fully equipped 24-core fiber optic patch panel provides organized, protected, and easily accessible fiber management for data centers, telecom networks, and enterprise LAN/WAN systems.Key Features

Capacity and Connectivity: A 24-core patch panel can accommodate up to 24 optical fibers, often using LC duplex or SC simplex adapters, supporting up to 48 fibers in total with duplex connections. It is compatible with FC, SC, ST, and LC adapters, allowing versatile connectivity for different network setups . **Design and Mounting:** Most 24-core panels are designed for 19-inch rack mounting and may feature sliding or drawer-style trays for easy access to splices and patching. Wall-mounted options are also available for smaller installations . The sliding tray design simplifies maintenance and fiber management. **Durability and Materials:** Panels are typically constructed from cold-rolled steel, aluminum alloy, and durable plastics, providing corrosion resistance and long-term durability. Protective coatings and static-resistant materials ensure safe handling and fiber protection . **Fiber Management:** Each port is clearly labeled for accurate identification, and splice trays are designed to maintain proper fiber bending radius. Panels support both ribbon and individual fiber cables, with integrated cable fixing and protection features. Some models include 30° oblique adapter installation to prevent eye exposure to laser light . **Pre-Terminated Options:** Certain models, such as CommScope FPX series, can be shipped with factory-installed adapter packs or pre-terminated pigtail assemblies, reducing installation time and simplifying deployment . **Applications:** Fully equipped 24-core patch panels are ideal for FTTH deployments, telecom backbones, data centers, enterprise LAN/WAN, and CATV/broadband networks, providing organized, reliable, and scalable fiber management . **Environmental Specifications:** Typical operating temperatures range from -25°C to +55°C, with dielectric intensity ratings of $\geq 3\text{KV (DC)/1min}$, ensuring safe operation in various environments .

Summary

A 24-core fiber optic patch panel fully equipped with cables offers a robust, flexible, and user-friendly solution for structured cabling. It ensures efficient fiber termination, splicing, and distribution while maintaining network reliability and ease of maintenance. Options include rack-mounted or wall-mounted designs, sliding trays, and pre-terminated configurations for faster deployment and reduced installation complexity .
