

German fiberglass cable tray ladder type dimensions

Overview

FIBERGLASS CABLE LADDER TRAY Enduro fiberglass cable ladder tray is designed specifically to endure the harshest environments and increase operational safe.

Key Takeaways

Fiberglass ladder-type cable trays in Germany typically feature rail heights of 60 mm, widths from 200 to 400 mm, and rung spacing of 150 mm, with material and design conforming to DIN standards.

- Rail Height: 60 mm for standard ladder trays (KL 60 series) used in ceiling installations .
- Tray Widths: Common widths are 200 mm, 300 mm, and 400 mm, suitable for various cable loads .
- Rung Spacing: Transverse rungs are spaced at 150 mm intervals, providing adequate support for cables .
- Rung Profile: C-profile rungs with a slot width of 16 mm, compatible with type B yoke clamps .

Material and Construction

- Material: Pultruded or molded fiberglass reinforced plastic (FRP) with resin content between 45–65% by weight for pultruded components and 25–45% for molded components .
- Fire Rating: Class 1 flame spread rating (≤ 25) per ASTM E-84 .

- UV and Chemical Resistance: All components include UV inhibitors and chemical-resistant surfacing veils for durability in harsh environments .

- Conductive Options: Carbon additives can be included in resin systems to provide static dissipation for conductive trays .

Fittings and Accessories

- Couplers: Straight couplers (e.g., KLVB 60/4) connect two ladder sections using mushroom-head bolts .

- Bends and Tees: 45° and 90° horizontal/vertical bends, tees, and crosses are molded or resin transfer molded for concentric curvature .

- Supports: Cantilever brackets (KTAG 200, 300, 400) or threaded rods with verified fire-rated fasteners are used for ceiling or wall mounting .

Applications

These ladder-type FRP trays are suitable for offshore platforms, chemical plants, oil and gas refineries, and water treatment facilities, offering corrosion resistance, lightweight construction, and non-conductive properties .

Notes

- Custom widths, rail heights, and resin systems can be manufactured on request .

- Vertical cable ladders follow DIN 4102 Part 12 specifications for fire protection and structural integrity, with widths ranging from 200 to 600 mm and maximum cable dead weight of 20 kg/m . This combination of dimensions, material properties, and fittings ensures that German fiberglass ladder-type cable trays meet both operational and safety requirements for industrial and commercial installations.
