

How long should the protective sleeve for the fiber optic patch panel be

Overview

Protection sleeves come in a variety of lengths and diameters. Outer diameters can range from 1. Unlike electrical cables, optical fibers are highly sensitive to bending stress, surface contamination, and uneven mechanical pressure. A clearly. The protection sleeve was created to protect a spliced fiber and must be installed on the fiber before the fusion splice is performed (otherwise you will have to break the fiber and start again). The construction of the three separate protective and strengthening elements of the sleeve are distinctive in the function that each provides. This products is made up of cross linked polyolefin heat-shrinkable tubes, hote melt tubes and Stainless steel needle. It is specifically designed for the protection of fiber optical.
