

How to connect a handheld fiber optic light source

Overview

FS FOLS-201 Handheld Fiber Optical Light Source User Learn how to use the FOLS-201/FOLS-202 Handheld Fiber Optical Light Source with this FS FOLS-201 Handh.

Key Takeaways

To connect a handheld fiber optic light source, remove the dust cap, attach the appropriate fiber connector, select the desired wavelength, and ensure the connection is secure before testing.

- **Power On the Light Source** Press the ON/OFF button to turn on the device. Some models have an auto-off feature that can be disabled by holding the button for a few seconds until “PERM” appears on the display .
- **Remove Dust Caps** Carefully remove the protective dust cap from the light source output port and from the fiber connector to prevent contamination .
- **Select the Correct Connector Type** Handheld light sources typically support FC, SC, ST, or LC connectors. Match the connector type of your fiber patchcord to the light source port .
- **Connect the Fiber Patchcord** Gently insert the fiber patchcord into the light source output port. Avoid forcing the connector to prevent damage to the ferrule or lens .

- **Choose the Wavelength** Press the wavelength selection button to choose the appropriate output wavelength (e.g., 850nm, 1310nm, 1550nm). Ensure the power meter or measurement device is set to the same wavelength for accurate readings .
 - **Connect to a Power Meter (Optional)** If measuring optical power, connect the free end of the fiber patchcord to a power meter. Turn on the power meter and allow it to warm up for one minute. Verify that the display responds to changes in light input .
 - **Check for Cleanliness** Inspect the connectors for dust or dirt. Clean with a lint-free swab and alcohol if necessary, as contamination can reduce output power and affect measurement accuracy .
 - **Adjust Output Mode (Optional)** Some light sources allow continuous or modulated output. Select the mode according to your testing requirements .
- Tips for Safe and Accurate Use**
- Handle connectors gently to avoid damage.
 - Avoid exposing the light source or fiber to extreme temperatures.
 - Allow the light source to warm up for a few minutes for stable output.
 - Use color-coded patchcords: yellow for singlemode, orange or gray for multimode fibers .
 - Regularly check battery levels to prevent interruptions during testing . Following these steps ensures a secure connection and accurate fiber optic testing with a handheld light source.
