

Huawei Aggregation Switch Layer 3

Overview

Standalone AC Solution: Aggregation Switches Function as Gateways Aggregation switches set up stacks to implement device-level backup and increase the inte.

Key Takeaways

Huawei aggregation switches with Layer 3 capabilities provide high-performance routing, link aggregation, and VLAN management for campus and enterprise networks. Overview

Huawei aggregation switches, such as the S6730-H series, are designed to serve as aggregation or core switches in campus networks, offering high-density 10GE downlinks, 40/100GE uplinks, and robust Layer 3 routing capabilities . These switches support OSPF, BGP, RIPng, IS-IS, VRRP, and ECMP, enabling efficient routing and redundancy across large-scale networks . They also integrate WLAN AC functions, allowing centralized management of up to 1,024 APs and unified wired-wireless policies .

Layer 3 Link Aggregation (Eth-Trunk)

Huawei switches implement link aggregation through Eth-Trunk, which bundles multiple physical interfaces into a single logical interface to increase bandwidth and provide redundancy . For Layer 3 configurations:

- Create a Layer 3 Eth-Trunk and assign an IP address to the logical interface.
- Add member Ethernet interfaces to the Eth-Trunk to participate in routing and forwarding.

- Configure routing protocols on the Eth-Trunk interface to enable Layer 3 connectivity between switches or routers . This setup improves link reliability, load balancing, and bandwidth utilization, while allowing the aggregated interface to function as a Layer 3 gateway for VLANs and routed networks .

VLAN and IP Configuration

Aggregation switches handle VLAN segmentation and Layer 3 IP routing:

- Assign VLANs to interfaces and configure IP addresses on Layer 3 interfaces to enable inter-VLAN routing .
- Avoid using VLAN 1 as a management or service VLAN to prevent service interruptions .
- Configure DHCP services on aggregation switches to assign IP addresses to wired and wireless clients .
- Implement VRRP and HSB for high availability and seamless failover in Layer 3 networks .

Advanced Features

Huawei aggregation switches support:

- VXLAN with BGP-EVPN for multi-tenant segmentation and cloud-scale designs .
- Logical stacking and Ethernet ring protection (SEP/ERPS) with sub-50 ms fault recovery for resilient campus networks .
- Security and monitoring features including ECA, DoS protection, DHCP spoofing prevention, and real-time telemetry via iPCA and CampusInsight .

Summary

Huawei Layer 3 aggregation switches combine high-density connectivity, advanced routing, link aggregation, and centralized wireless management. They are ideal for campus backbone, enterprise core, and high-performance aggregation layers, providing scalability, reliability, and efficient traffic management for modern digital infrastructures .
