

Invisible ventilation holes in the distribution box

Overview

Ventilation holes in corrugated boxes are precisely designed openings, typically die-cut, strategically placed in the walls of the box. These are not random punctures; they are engineered features intended to facilitate controlled airflow. Corrugated boxes are the unsung heroes of global commerce, transporting goods across vast distances and diverse climates. While their strength and protective structure are essential, a less visible yet equally critical design element is ventilation. Also a rule of thumb expression is given to estimate the cross-section of the venting. Vent holes are simple, evenly spaced perforations made in the metal enclosure panels. How to.
