

## Price of replacing a unit s electrical distribution box

### Overview

A typical home replacement for a 100-125A indoor panel runs about \$1,200-\$2,500 in parts and labor; a 200A outdoor upgrade with new meter socket can reach \$3,000-\$6,000. Assumptions: standard conduit routing, existing wiring reachable within 10-30 feet, and a single dwelling. An outdated electrical system can cause your homeowner's insurance to be canceled if you live in the Bay area. An upgraded electrical box can be a key selling point for home buyers in San. Consumer units—often referred to as fuse boxes, fuse boards, or electrical panels—are crucial electrical safety components found in residential and commercial buildings. Usually hidden away in under-stairs cupboards, you might not pay them much attention until a fuse blows and you're trying to. Buyers typically pay for a full panel replacement, including labor, materials, and permits. It manages power flow and uses circuit breakers to protect wiring from overcurrent, preventing electrical fires. Replacing this unit is a significant and complex home investment.
