Frequently Asked Questions

What is a fiber cable?

A fiber cable, also known as an optical fiber cable, is a type of cable consisting of one or more optical fibers that are used to transmit digital...

What is the difference between single-mode and multimode fiber cables?

Single-mode fiber cables have a smaller core diameter and allow only one mode of light to propagate through the fiber, resulting in less signal att...

What is fiber bundle?

A fiber bundle is a collection of optical fibers that are bundled together to form a larger cable. Fiber bundles are often used in medical imaging...

What is the cladding on a fiber cable?

The cladding on a fiber cable is a layer of material surrounding the core of the cable, which helps to keep the light signals confined within the c...

What is the numerical aperture of a fiber cable?

The numerical aperture of a fiber cable is a measure of the light-gathering ability of the cable. It is determined by the refractive index of the c...

What is fiber optic attenuation and how is it measured?

Fiber optic attenuation is the loss of signal strength as light travels through a fiber optic cable. It is measured in decibels (dB) and can be cau...

What is a fiber optic patch cable?

A fiber optic patch cable is a short length of fiber cable with connectors on both ends, used to connect optical devices such as routers, switches,...

What is dispersion in a fiber cable?

Dispersion is the broadening of a light pulse as it travels through a fiber cable, caused by differences in the speed at which different wavelengths...
