

Warranty warranty for SD-WAN devices SFP

Overview

Warranty Update on Cisco Pluggable Modules Product Bulletin Effective September 7, 2020, Cisco is offering a 5-year limited hardware warranty on Cisco® plug.

Key Takeaways

SD-WAN devices typically come with vendor-specific hardware warranties, while SFP transceivers often have shorter coverage periods, ranging from one to three years depending on the manufacturer. SD-WAN Device Warranty

Cisco Meraki SD-WAN devices such as the C8111-G2 and C8121-G2 are covered under a standard hardware warranty. If a device fails and troubleshooting cannot resolve the issue, Cisco support can process a Return Merchandise Authorization (RMA) to replace the device free of charge. The RMA usually includes a pre-paid shipping label, and the original packaging with serial number and order information may be required for the return. Cisco warranties are generally non-transferable and apply only to the original purchaser. Additional warranty details can be verified using Cisco's Warranty Finder tool. HPE Networking SD-WAN devices also have dedicated warranty coverage, which can be accessed through HPE's support portal. Warranty terms include hardware repair or replacement and may vary by product family. Fortinet SD-WAN appliances are listed in their ordering guide, which provides specifications and support options. While the guide primarily focuses on deployment and licensing, Fortinet devices typically include standard hardware warranties, with extended support available through service contracts.

SFP Transceiver Warranty

SFP transceivers, which are often used as interface modules in SD-WAN deployments, generally have shorter warranty periods than the main appliances. For example, Forcepoint NGFW SFP transceivers come with a one-year hardware warranty from the date of purchase, while full-size interface modules may have a three-year warranty. Accessories like rack rails are usually covered for 90 days. This pattern is common across vendors, with SFPs considered consumable or replaceable components.

Key Considerations

- **Warranty Duration:** SD-WAN appliances often have multi-year warranties (commonly 3–5 years), whereas SFPs are usually 1 year.
- **RMA Process:** Most vendors require contacting support to confirm device failure before issuing an RMA. Original packaging and serial numbers are often required.
- **Non-Transferable:** Warranties typically apply only to the original purchaser or end user.
- **Extended Support:** Vendors may offer extended warranties or advanced replacement options through service contracts. For accurate warranty coverage, it is recommended to check the vendor-specific warranty portal or datasheet for the exact SD-WAN device and SFP model in use.
