

What brand is CS connector

Overview

CSS Connector Catalog 50 years of expertise delivering reliable connector solutions for automotive, industrial, appliance, and power applications worldwide.

Key Takeaways

The CS connector is primarily associated with SENKO Advanced Components. Overview

The CS connector is a high-density, ceramic-based fiber optic connector designed for modern data center and telecommunications applications. It is engineered to provide twice the density of traditional LC connectors, making it ideal for high-speed networks, including 200G, 400G, and even 800G data rates. SENKO's CS® connectors are widely used in patch panels, cassettes, modules, and switches where space optimization and high performance are critical.

Key Features

- **Compact Design:** The CS connector is narrower and shorter than LC connectors, reducing the footprint by approximately 40%.
- **Push-Pull Tab:** Facilitates easy insertion and removal in high-density environments.
- **High Performance:** Typical insertion loss is 0.12 dB, with a maximum of 0.25 dB, ensuring reliable signal transmission.
- **High-Density Capability:** Supports up to 288–360 fibers per 1RU in patch panels, enabling efficient cable management.

- **Compatibility:** Supports two CS terminations in a single QSFP-DD/OSFP transceiver and works with uniboot 2F cables for organized cabling .

Applications

CS connectors are used in data centers, telecommunications networks, and industrial networks where high-density fiber management, low insertion loss, and reliable performance are required . They are particularly suited for next-generation IM-DD optics and high-speed network upgrades .

Conclusion

If your CS connector is a fiber optic connector used in high-density networking, it is most likely a SENKO CS® connector. This brand is recognized for its compact design, high performance, and suitability for modern data center and telecommunication applications .
